Art Unit: 1632

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 1-6 and 17-20, drawn to fusion proteins having the structure: PSMA-scFv: optional connector: cytoplasmic domain, classified in class 530, subclass 387.1.

II. Claims 7-16 and 21-32 drawn to a method of treating a patient comprising introducing an expression vector comprising a fusion protein having the structure: PSMA-scFv: optional connector: cytoplasmic into peripheral blood lymphocytes of the patient and reintroduce the peripheral blood lymphocytes, classified in class 424, subclass 93.21.

The inventions are distinct, each from the other because:

Inventions I and II are mutually exclusive and independent. The fusion proteins of invention I are not required for the method of treatment of invention II, and vice versa.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
